

Environmental footprints, accessible to everyone.

Get a grip on your environmental footprint. Lead your business to be future-proof.
With Ecochain's software and consulting solutions for Environmental Intelligence.

**Climate crisis,
Environmental regulations,
Carbon taxation,
Customer demand –
The world is demanding
sustainable change from
businesses like yours.**

You still have the option to choose:

**Embrace sustainability as
management KPI**

**Get disrupted as soon as
the wave hits**

But your time is running out.

**We help you drive
Environmental Intelligence
throughout your company.**

Why are **you** here?

We want to make **environmental claims** to our clients. But we have no data to prove this!

We want to understand our company's **environmental hotspots** and define and execute a strategy to improve them.

We want to design and manufacture **products** with a better sustainability performance.

We want to improve the collaboration with our **suppliers** and reduce our impact, together.

If this is you, Ecochain can help you.

Get a grip on your footprint. Then, improve it. Introducing the Sustainability Flywheel.

Becoming sustainable is a process. It requires constant iteration and continuous improvement. The Sustainability Flywheel guides you through the process of becoming a sustainable business. All our software and consulting solutions are designed to help you implement the Sustainability Flywheel and create a clear process to embracing Environmental Intelligence.

Embrace Environmental Intelligence with our software solutions.

Ecochain provides you with **steering information for sustainable leadership**. Through our Activity-based footprinting methodology, you can identify hotspots in your value chain and make more targeted decisions.

Compare environmental footprints across your entire product portfolio.

Mobius enables you to understand and **improve the environmental footprint of your product**, in a simple and easy-to-use online application.

With Mobius, you can compare different materials throughout the entire life cycle of your product.

Steer your business towards sustainability.

With Ecochain, our Environmental Intelligence Platform.

Thanks to our Activity-based Footprinting methodology, you can measure the footprint of all your operations and products at once – and identify hotspots, so you can take the most efficient steps to reduce your emissions efficiently. Our Environmental Intelligence Platform comes with comprehensive service through our environmental specialists.

Alexander Pouw, Commercial Director, Theo Pouw Groep

We are continuously trying to optimize our processes and reduce our energy consumption, use of materials and emissions. Ecochain helps us reduce the footprint of our customers' civil design projects and win tenders together.

BENEFITS

- Compare the emissions of your entire portfolio
- Gain strategic insights into your environmental performance
- Find hotspots throughout your value chain (Scope 1, 2 and 3)
- Access to our environmental specialists built-in

DETAILS

Ecochain facilitates the performance of Life Cycle Assessment studies according to ISO 14040/ISO14044, ISO 14025 and EN15804. It provides access to a large number of Life Cycle Inventory Databases, such as ecoinvent 3.2 and 3.4, Nationale Milieu Database and many others, including our own Ecochain database.

stakeholder in your company.**

Develop more sustainable products with ease

Measuring the environmental impact of your products is hard. With Ecochain, you can design products and compare different components on the go.

Calculating the environmental footprint of a product is painful: It takes time and environmental expertise - two things that are rarely available in time-pressured product teams.

How easy would it make your job, if you could compare different materials and processes with the click of a button?

Our Environmental Intelligence Platform enables Product Managers and Developers to make informed decisions about the environmental impact of their products - and choose alternatives that are better for their business and better for the planet.

KEY FEATURE

Scope 1,2,3

Impact Categories

Impact Flows

Product Footprint

Dashboards

Portfolio Footprint

Product Comparison

The product footprint allows you to compare different products down to a material level and find ways to reduce the impact of your products step-by-step.

Reducing the footprint of existing and new products is a key task for our product development. Ecochain makes it easy for us to compare different products and materials and make better choices.

Product Manager
Consumer Electronics Brand
Revenue >18 bn. €

WHAT YOU GET

Fast, 1-on-1 comparison between materials and energy flows for different products.

WHAT YOU AVOID

Complicated reports and external consultants, that make the development process longer than needed.

Outperform your competition, close more deals

Today, many companies rely on environmental data to make their buying decisions. Having the data available means closing more and bigger deals.

Most corporations already have clear guidelines about the environmental performance of their suppliers. But even medium-sized businesses often need to disclose the footprint of their suppliers, for example in public tenders.

How many of your clients would buy your products if you couldn't communicate their price? If they ask for it and you don't have it available right away, you will lose the deal.

With our Environmental Intelligence Platform, you always have access to the most recent environmental data of your products and portfolio - so that you can convince your customers with thorough, verified data.

Portfolio Footprint

Product Comparison

The product footprint allows you to compare different products down to a material level and pull any metric that your leads are asking for.

1 out of 3 leads asks us for our environmental cost indicators. With Ecochain, I already have them available. This has been a game changer for my business.

Sales Director
Asphalt Company
Revenue: >3.000.000 €

WHAT YOU GET

Relevant product data about your environmental performance.

WHAT YOU AVOID

Not being able to deliver the data that potential clients are asking for.

What if sustainability was more than just a project and a report?

Our Environmental Intelligence Platform helps you to identify the biggest levers in your value chain and reduce your footprint efficiently.

Without a customer relationship management system, your marketing and sales department could not work efficiently. If your finance department would work in Excel sheets only, they would need to double their staff.

So why is there no real management system for your company's sustainability goals? Ecochain's Environmental Intelligence Platform provides exactly that: A system that allows you to measure the footprint of your entire product portfolio, create up-to-date dashboards and produce LCAs and EPDs on demand. This allows you to measure the success of your sustainability-related projects and communicate the results with the rest of the company.

Virginia Rollando
Sustainability Manager
Saitex

Labels are everywhere, but if you really want to know where you're standing, you have to measure your environmental impact. Ecochain helps us with that.

KEY FEATURE

The portfolio footprint provides you with an overview about the environmental performance of your products, allows you to compare and deep-dive into the data.

- Scope 1,2,3
- Impact Categories
- Impact Flows
- Portfolio Footprint**
- Dashboards
- Product Footprint
- Product Comparison

WHAT YOU GET

Actionable insights into your environmental performance on product, process and company level.

WHAT YOU AVOID

Long reports with little insights and high costs.

Step one to circularity: Find greener suppliers

Ecochain helps to identify the biggest emitters throughout the supply chain, so you can replace them with greener alternatives and make a step towards circularity.

In most companies, the value chain produces the majority of the environmental impact. But with hundreds or even thousands of suppliers, it is impossible to analyze their environmental performance continuously.

Ecochain provides Supply Chain and Procurement professionals with the tools they need to understand the impact across their entire value chain, identify the biggest emitters and make smart buying decisions. Because circularity starts in procurement.

Procurement Officer
Infrastructure
Revenue > 10 mio. €

We have ambitious sustainability goals, and our supply chain plays a crucial role for these. With Ecochain, we can easily find hotspots in our value chain.

KEY FEATURE

Use the impact flows to identify hotspots in your supply chain. Leverage suppliers with a better environmental performance to effectively reduce the impact of your company.

Scope 1,2,3

Impact Categories

Impact Flows

Dashboards

Portfolio Footprint

Product Comparison

WHAT YOU GET

Identify hotspots throughout your value chain and work on the biggest levers.

WHAT YOU AVOID

Working blindfolded on small, incremental changes.

Avoid higher prices, drastic regulations and competitive disadvantages

Our Environmental Intelligence Platform helps finance professionals to keep track of environmental KPIs – and enables them to manage business-threatening risks proactively.

Your environmental performance is putting your business at risk: Environmental regulations and taxation are already in place in many industries. Carbon taxation and a change in the market will keep increasing momentum.

Could you make accurate, reliable forecasts without your bookkeeping and controlling solutions? The answer is probably no. The same applies to your environmental performance: To make smart decisions for the future, you have to understand today's biggest risks. Use Ecochain as your environmental bookkeeping system - to steer the business forward responsibly.

KEY FEATURE

Ecochain can measure the emissions for Scope 1, 2 and 3 - and helps your team to identify the biggest levers of your environmental performance. Is it the supply chain? Or rather the internal production?

Impact Flows

Portfolio Footprint

Product Comparison

The European discussions about carbon taxation will have massive implications on energy-intensive businesses like ours. We need to prepare ourselves now.

CFO
Chemical company
Revenue > 500 mio. €

WHAT YOU GET

Steering, actionable information on the status quo of the company's impact.

WHAT YOU AVOID

Blindly running into increased regulations and taxation.

Will you lead or be left behind?

Your customers and partners demand change. Carbon taxation and other regulations are only a matter of time. This makes the footprint of your products and your company your most crucial KPI for the future.

Would your business still exist, if you would have to pay 50 € per ton on your carbon emissions next year? If you could not answer this question, your business would have already failed in countries like Canada or South Africa.

But carbon taxes and other environmental regulations are on the rise in every country in the world. And they are here to stay. That is why reducing your company's carbon footprint is more than just a marketing campaign - it is your only chance to be ready for tomorrow. Ignoring this urgent issue is a luxury no company can afford. This is why Ecochain's Environmental Intelligence Platform helps companies to manage, analyze and reduce their environmental impact - to compete now, and in the future.

We distinguish ourselves towards our clients through high-value products with low CO2 emissions. Ecochain helps us to reduce costs and shows us how we can produce our materials with less energy.

Alexander Pouw
Commercial Director
Theo Pouw Groep BV

KEY FEATURE

Our dashboards provide quick insights about the environmental performance of the company and the development over the last months. They also provide the ability to quickly dive into individual numbers and analyze causes and solutions.

- Scope 1,2,3
- Impact Categories
- Impact Flows
- Dashboards
- Portfolio Footprint
- Product Footprint
- Product Comparison

WHAT YOU GET

The biggest levers to efficiently reduce your footprint and measure your sustainability projects.

WHAT YOU AVOID

Losing market share and a clear path for the company's future.

Are your investments ready for the future?

The companies with the biggest footprint will be the first to be disrupted. Ecochain keeps your portfolio company future-proof by providing solutions to improve the environmental performance efficiently.

Around the globe, governments are passing new environmental regulations. Consumers are marching through the streets, demanding change. Businesses set new rules for their partnerships.

Already today, companies need to be aware of their environmental impact. In many industries, this is a matter of competing versus going out of business. This development will not stop: Managing your emissions will be just as important as managing your customer relationships.

Ignoring this urgent issue is a luxury no company can afford. This is why Ecochain's Environmental Intelligence Platform helps companies to manage, analyze and reduce their environmental impact - to compete now, and in the future.

Fred Bos
Managing Director Advisory Banking
ABN AMRO

This initiative should further aid us in helping our clients make their business more sustainable.

KEY FEATURE
